

Reduce risk of automation failure with lifecycle management

To succeed in the highly competitive pharmaceutical industry, cost-effective production is a must. Therefore, it is vital to plan ahead and invest wisely in your equipment.

The ever-increasing shift towards digitalization continues to permeate the industry, bringing with it a need to update old legacy systems and improve industrial IT security to ensure production runs smoothly.

Ultimately, enhancing your automation and focusing on life cycle management for your production equipment will reduce the risk of unplanned downtime and maintenance and save time and money long-term.

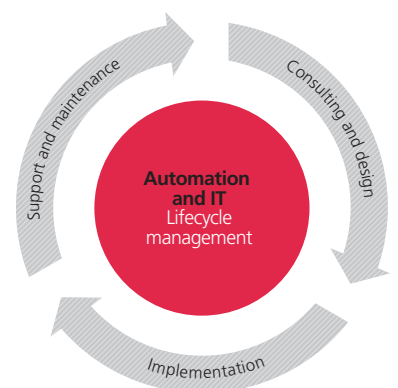

IS YOUR FACILITY AT RISK? FIND OUT WITH NNE'S ADVANCED SITE ASSESSMENT

To help future-proof your facility and mitigate risk, our specialists offer an automation assessment of your equipment, production line or even the entire site – and a report on your production lifecycle, including:

- Automation compliance status
- Lifecycle status on equipment
- Industrial security and threat landscape
- Estimation of production failure risks
- Level of maintenance of production
- Migration recommendations

Based on this analysis, we offer potential solutions to upgrade any outdated

equipment and, if needed, an end-to-end solution that covers all potential risks.
